

Phase 7.3 - Account Lockout Policy

Open the Password Policy Area

On DC1, open Group Policy Management and navigate to Default Domain Policy.

Right-click Edit and browse to:

Computer Configuration > Policies > Windows Settings > Security Settings > Account Policies > Account Lockout Policy

Configure the Policy

An example of acceptable policy configuration:

Account lockout threshold - *5 invalid login attempts*

Account lockout duration - *15 minutes*

Reset account lockout after - *15 minutes*

Apply the Changes

Click Apply and then OK

Close the editor

Update the Policy

On CLIENT-1, open Command Prompt as Administrator

Run the command `gpupdate /force`

Wait for the success message

Prepare Your Test Account

Pick one of the users OTHER THAN Administrator

Before continuing, be sure you know the correct password for the chosen user account

Intentionally Lock the Account

At the Windows sign-in screen, intentionally enter the wrong password 5 times

Windows should indicate that the account has been locked

Confirm the Lockout in Active Directory

In DC1, open **Active Directory Users and Computers**

Locate your test user

Right-click the account

Select **Properties** and click on the **Account** tab

If the account is currently locked, you'll see an option to unlock it

Unlock the Account

Check the box next to Unlock Account

Click **Apply** and then **OK**

The user should be able to sign in immediately without waiting for the 15 minute lockout duration to expire
