

Phase 7.1 – Creating Group Policies

Creating the First GPO

Verify Test User Exists

In Active Directory, verify Sales OU exists containing at least one user account.

Open Group Policy Management

On DC1, open **Tools > Group Policy Management**

Locate the Sales OU

Expand Forest: <yourname>.lab > Domains > <yourname>.lab

Find Sales

Create a New GPO

Right-click Sales and select Create a GPO in this domain, and link it here

Name the policy **Sales – Disable Control Panel**

Click OK

Naming conventions, such as “Sales – Disable Control Panel” immediately tells a user WHO it effects and WHAT the GPO does

Edit the GPO

Right-click “Sales - Disable Control Panel” and choose Edit

Navigate to the Setting

Expand User Configuration > Policies > Administrative Templates > Control Panel

Locate “Prohibit access to Control Panel and PC settings and double-click it

Enable the Setting

Select “Enabled” and click Apply, then click OK and close the editor

Force Group Policy Update

Open Command Prompt as Administrator

Run the command `gpupdate /force`

You should see “Updating policy...”

And eventually:

Computer Policy update has been completed successfully.

User Policy update has completed successfully.

Log In as a Sales User

Sign in with a user account located inside the Sales OU

Test the Restriction

Attempt to open Control Panel or Settings

Expected result:

A message indicating the operation has been restricted by your administrator.

Additional Verification

Log into CLIENT-1 with a different user

Attempt to open Control Panel

Expected Result:

Control Panel opens normally
