

Active Directory Home Lab - Phase 1

Creating the DC1 Virtual Machine

1. Install VirtualBox

- Download and install VirtualBox by visiting:
 - <https://www.virtualbox.org/wiki/Downloads>
- Select the appropriate installation package for your operating system. (In this scenario, I will be using Microsoft Windows 11 Pro as my host machine)

2. Download Windows Server 2022

- Download the Windows Server 2022 Evaluation ISO (180-day trial):
 - <https://www.microsoft.com/en-us/evalcenter/evaluate-windows-server-2022>
- Select:
 - **Windows Server 2022**
 - **ISO Download**

3. Create the Virtual Machine

Name

- DC1

Type

- Microsoft Windows

Version

- Windows 2022 (64-bit)

4. Configure Virtual Hardware

Expand **Specify Virtual Hardware**.

Memory

- 4096 MB (4 GB)

Processors

- 2 CPUs

5. Configure Virtual Hard Disk

Expand **Specify Virtual Hard Disk**.

Disk Type

- VDI

Storage

- Dynamically Allocated

Size

- 80 GB

Note

Depending on your VirtualBox version, some options may only appear after selecting **Expert Mode** in the upper-left corner.

6. Configure Networking

1. Select the newly created virtual machine.
2. Open **Settings**.
3. Select **Network**.

Adapter 1

- Attached to: NAT

Current VM Specifications

Component	Configuration
VM Name	DC1
Operating System	Windows Server 2022
Memory	4096 MB
Processors	2 CPUs
Disk Size	80 GB
Disk Type	VDI
Storage Allocation	Dynamically Allocated
Network Adapter	NAT
